

## Fire Hazard Mitigation Checklist

<b>Electrical Hazard Mitigation</b>	<b>YES</b>	<b>NO</b>
Eliminate electrical outlet overloads.		
Ensure that all power strips have circuit breakers.		
Avoid using power strips or extension cords in series.		
Plug heavy appliances directly into wall outlets (not power strips)		
Eliminate three-prong/two-prong adapters.		
Replace long-term use of extension cords with permanent wiring.		
Have a heavy-duty extension cord available for power tools.		
Avoid electrical cords under carpets or across high-traffic areas.		
Replace broken or frayed electrical cords.		
Repair or replace faulty electrical appliances.		
Know how and where to shut off electrical power.		
Contact an electrician for electrical improvements (if needed).		
Have a Class C or ABC fire extinguisher available.		
<b>Natural Gas Hazard Mitigation</b>	<b>YES</b>	<b>NO</b>
Install a natural gas monitor.		

Test monitor monthly.		
Know how and where to shut off gas.		
Label gas meter shutoff valves.		
Store shutoff wrench near gas meter.		
Install a natural gas monitor.		
<b>Flammable Liquids Hazard Mitigation</b>	<b>YES</b>	<b>NO</b>
Identify flammable products (read labels).		
Keep flammables in approved safety containers.		
Use flammable liquids only in well-ventilated areas.		
Store flammable liquids in a fireproof cabinet away from living areas.		
Eliminate sources of ignition near flammables.		
Wipe up spills immediately to reduce fumes.		
Separate incompatible materials (flammables and corrosives).		
Have a Class B or ABC fire extinguisher available.
